- Troubleshooter

How Tsunamis are detected?

Deep-ocean Assessment and Reporting of Tsunamis DART II

6000m

6000m = 20 x Eiffel tower

5 cm = height of credit card

Even if 5 cm change, alerts triggered

Agenda

1: What?

What are the micrometrics that you want to monitor?

2: How?

How to source these metrics?

3: Where?

Where to use these metrics?

Macrometrics

Primary Macro-metrics that are monitored today

1. Response Time

2. CPU Utilization

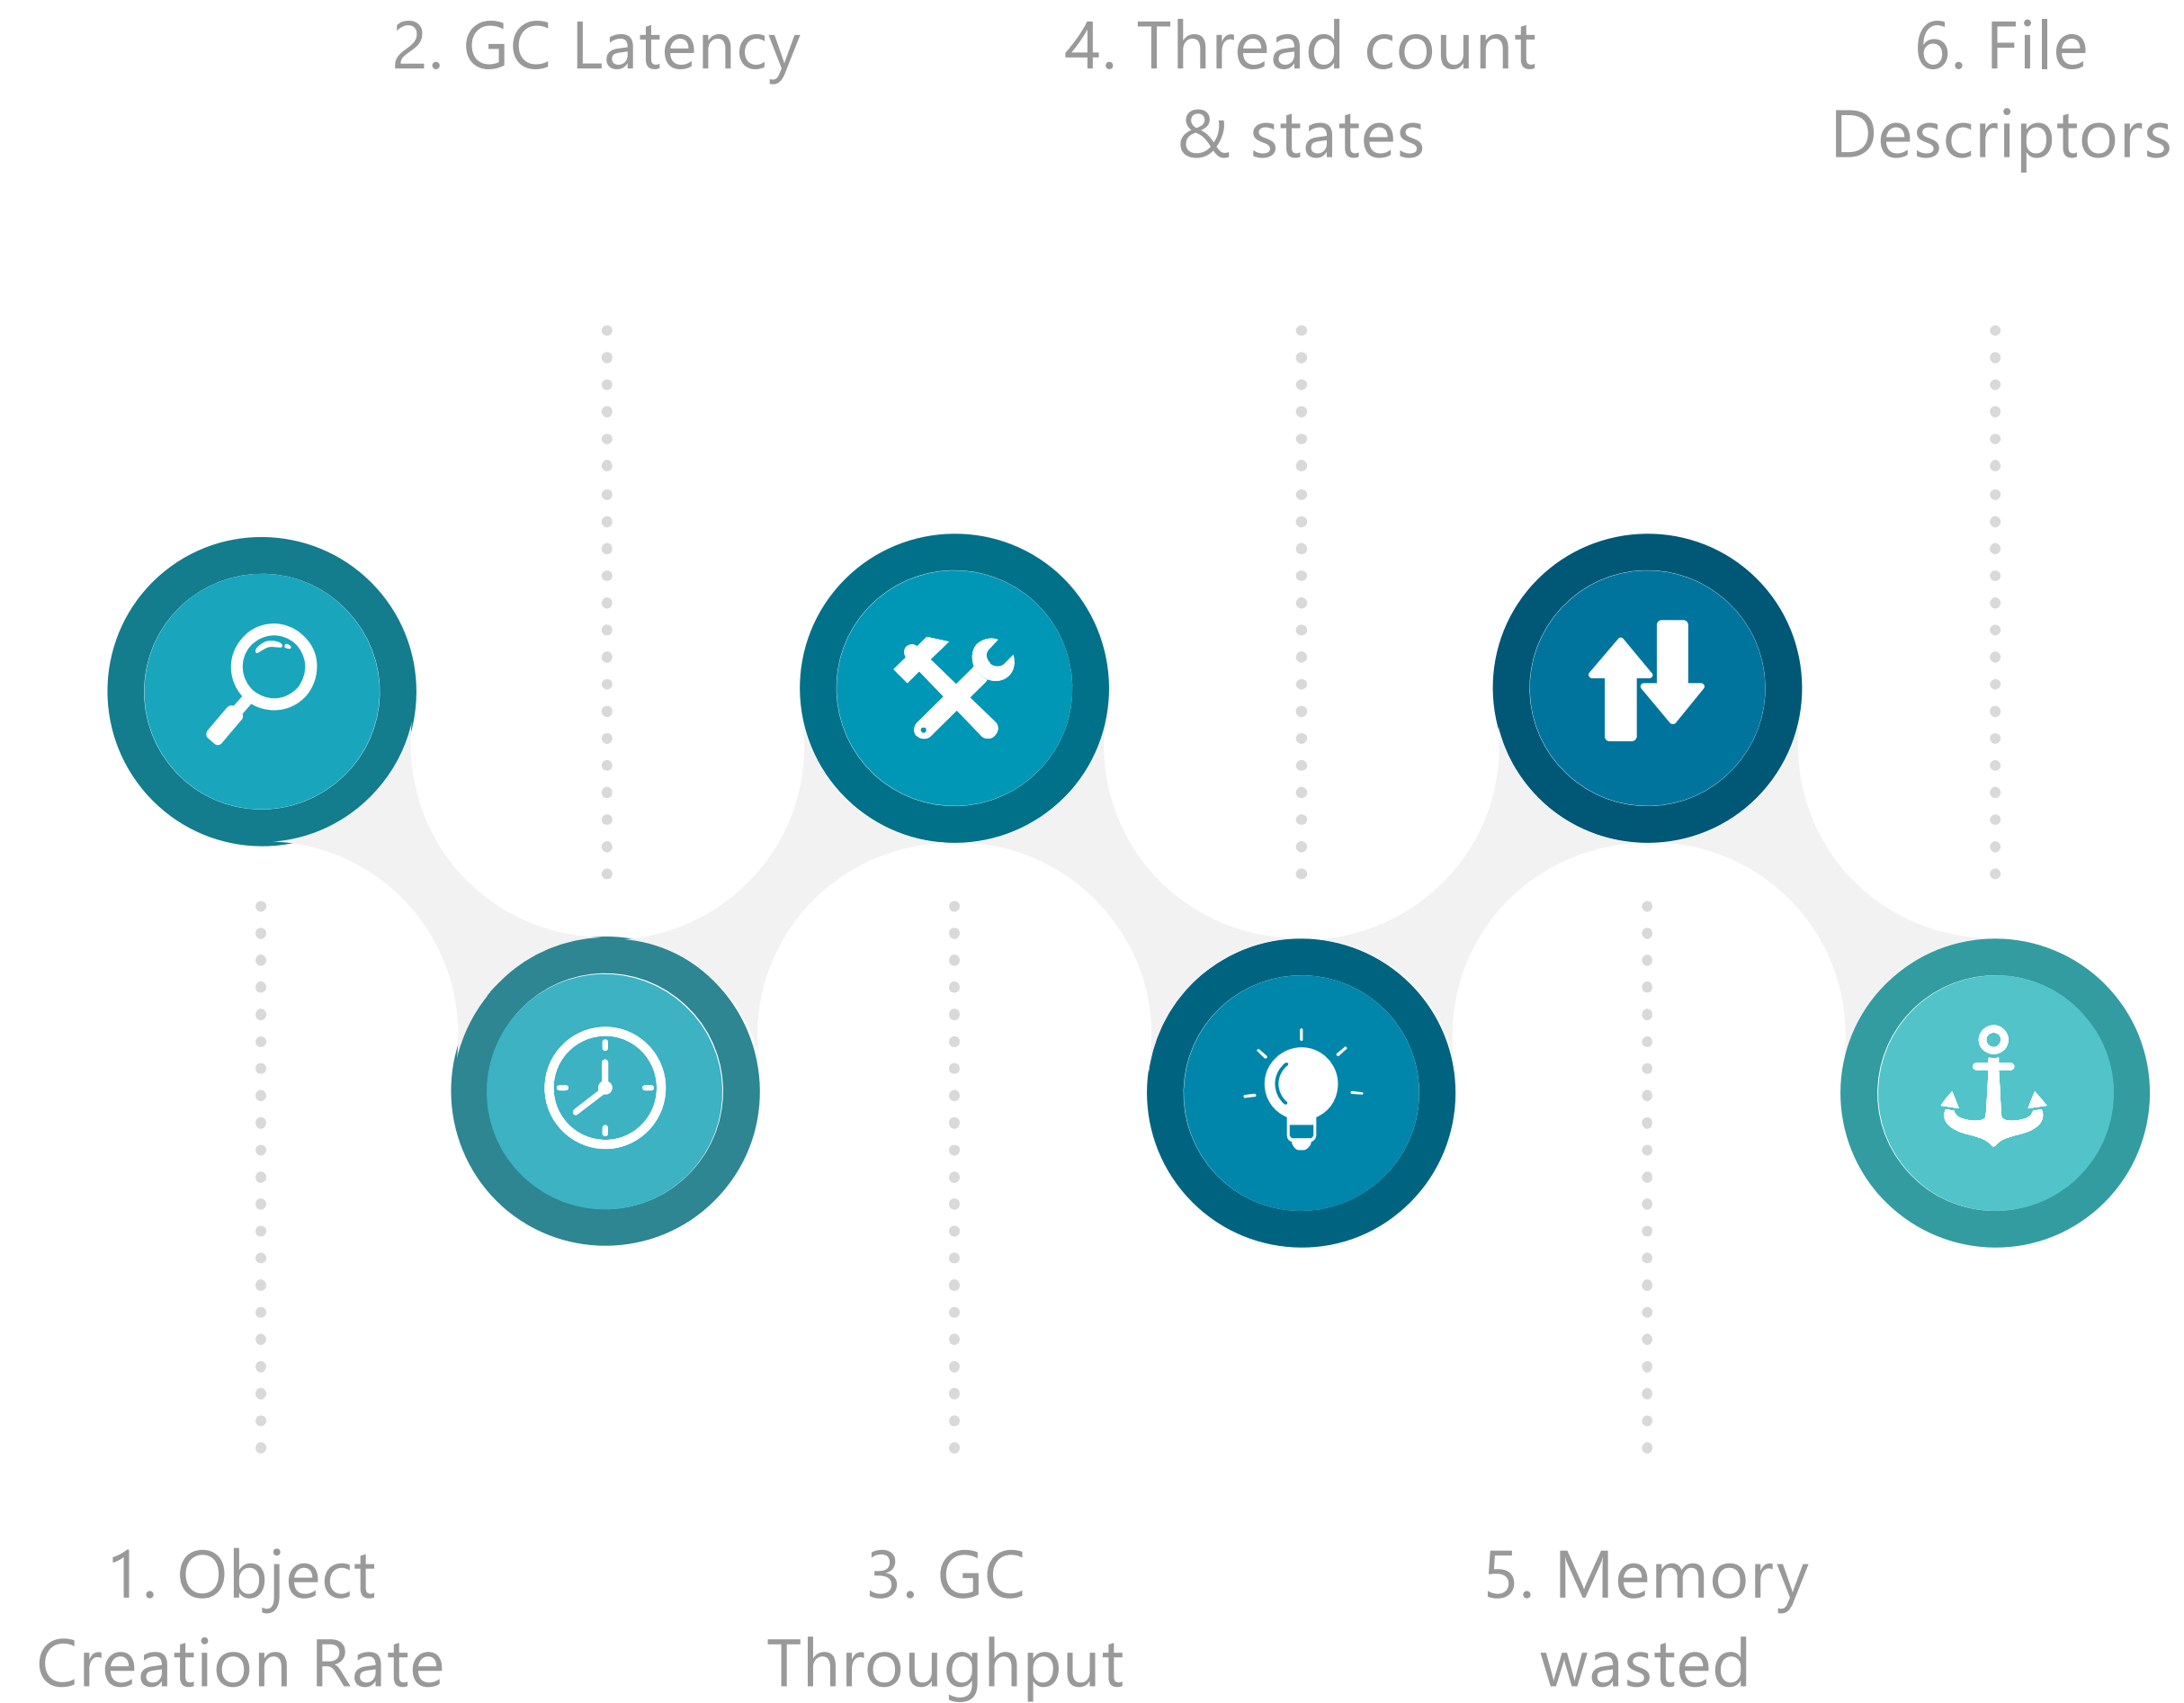

3. Memory

Can't forecast problems

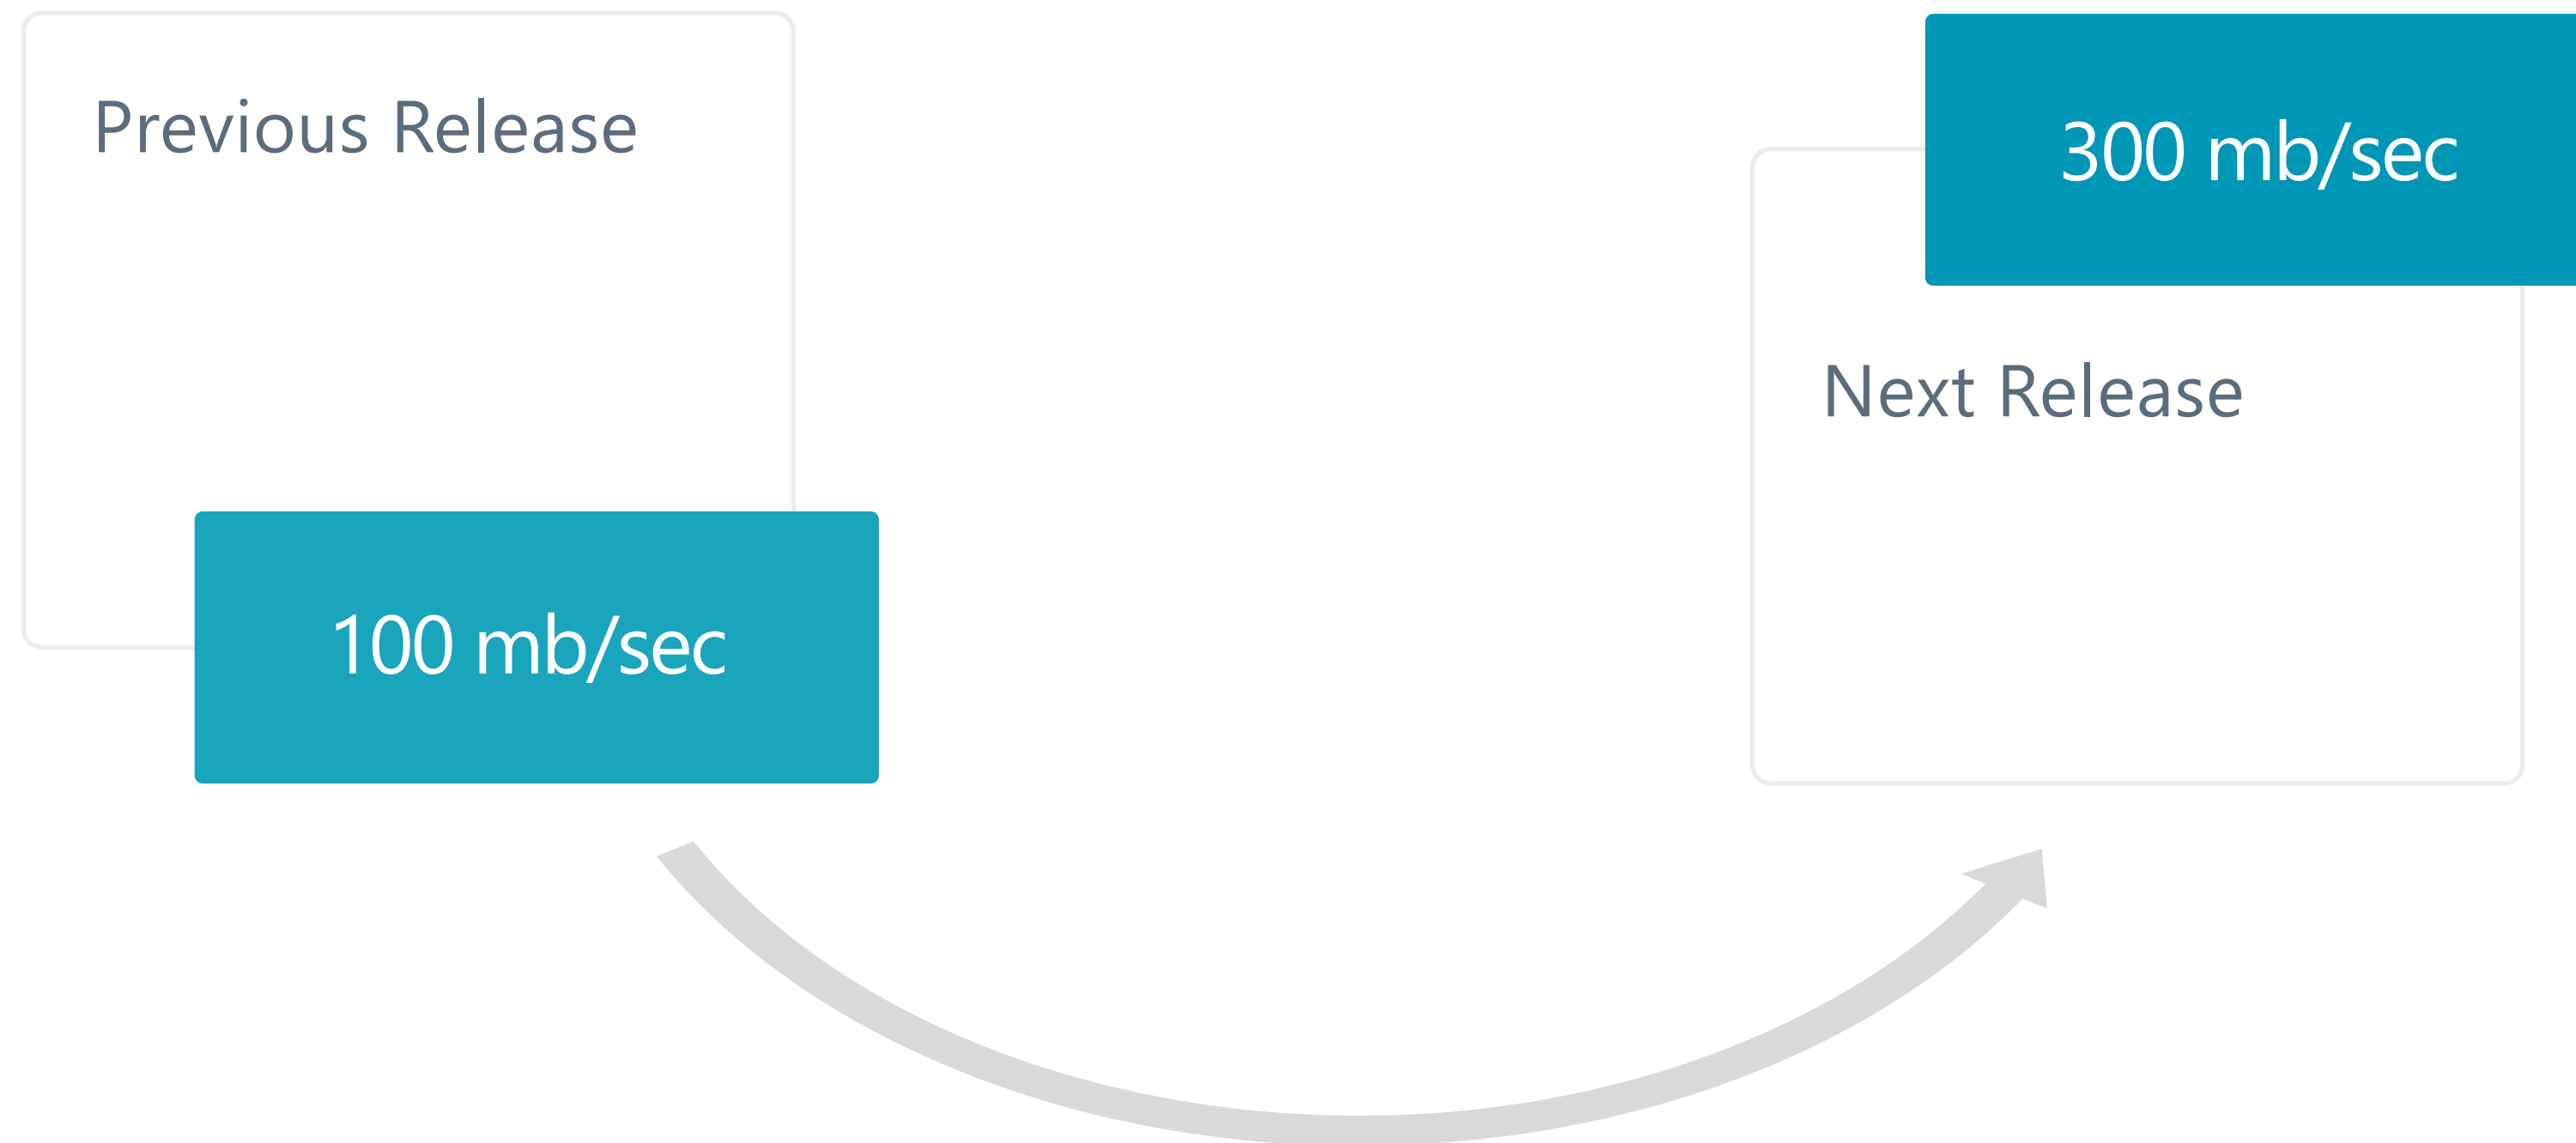

Micrometrics

Monitor these metrics in addition to Macrometrics

1. Object Creation rate

Amount of objects created in a unit of time

2. Garbage Collection Latency

Amount of time application is paused for doing Garbage Collection

Avg Pause GC Time ?	2 sec 350 ms
Max Pause GC Time ?	19 sec 30 ms

GC Pause Duration Time Range ?:

Duration (secs)	No. of GCs	Percentage
0 - 2	403	57.407%
2 - 4	239	91.453%
4 - 6	13	93.305%
6 - 8	3	93.732%
8 - 10	15	95.869%
10 - 12	20	98.718%
12 - 14	6	99.573%
14 - 16	2	99.858%
18 - 20	1	100.0%

3. Garbage Collection Throughput

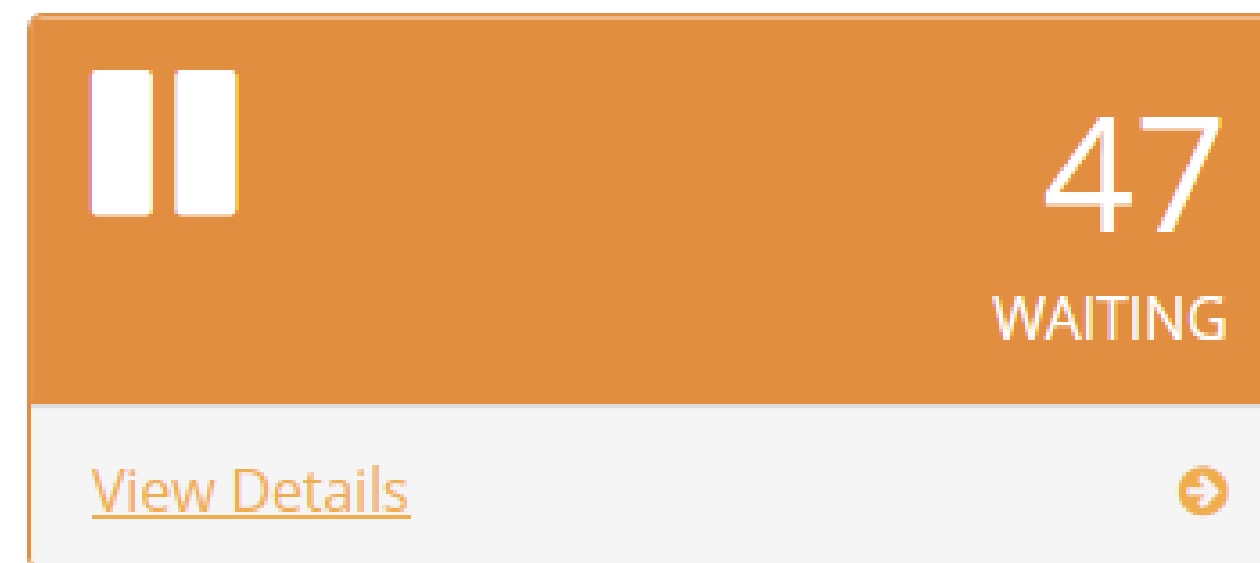

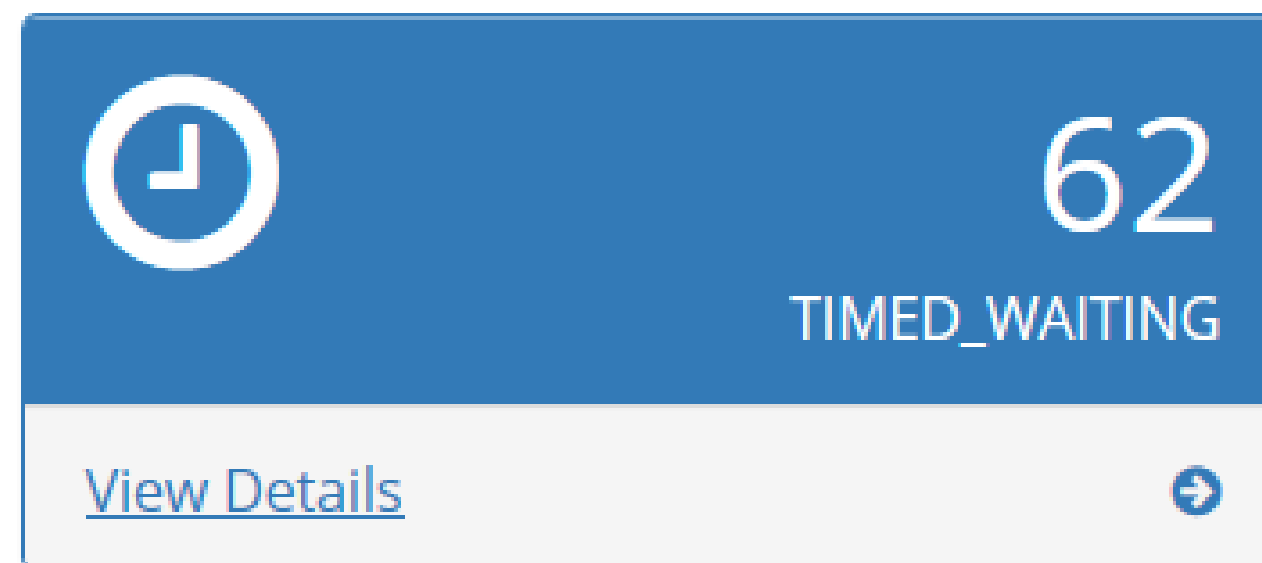

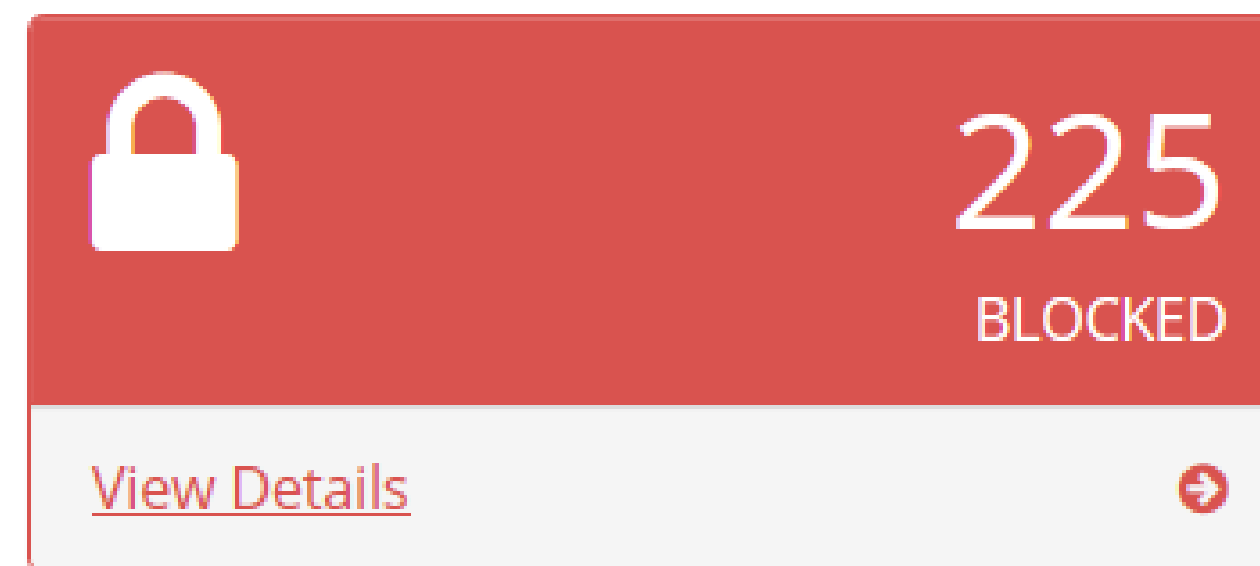

Productive work vs non-productive work

99.675%

Percentage of time spent in processing customer transactions vs time spent in GC activity.

4. Thread Count & Thread States

Number of Threads and their states

Thread state %

5. Memory Wasted

Amount of memory wasted due to inefficient programming practices

How all memory is wasted?

How all memory is wasted?

1: Duplicate Strings

2: Wrong memory size settings

3: Inefficient Collections

4: Duplicate Objects

5: Duplicate arrays

6: Inefficient arrays

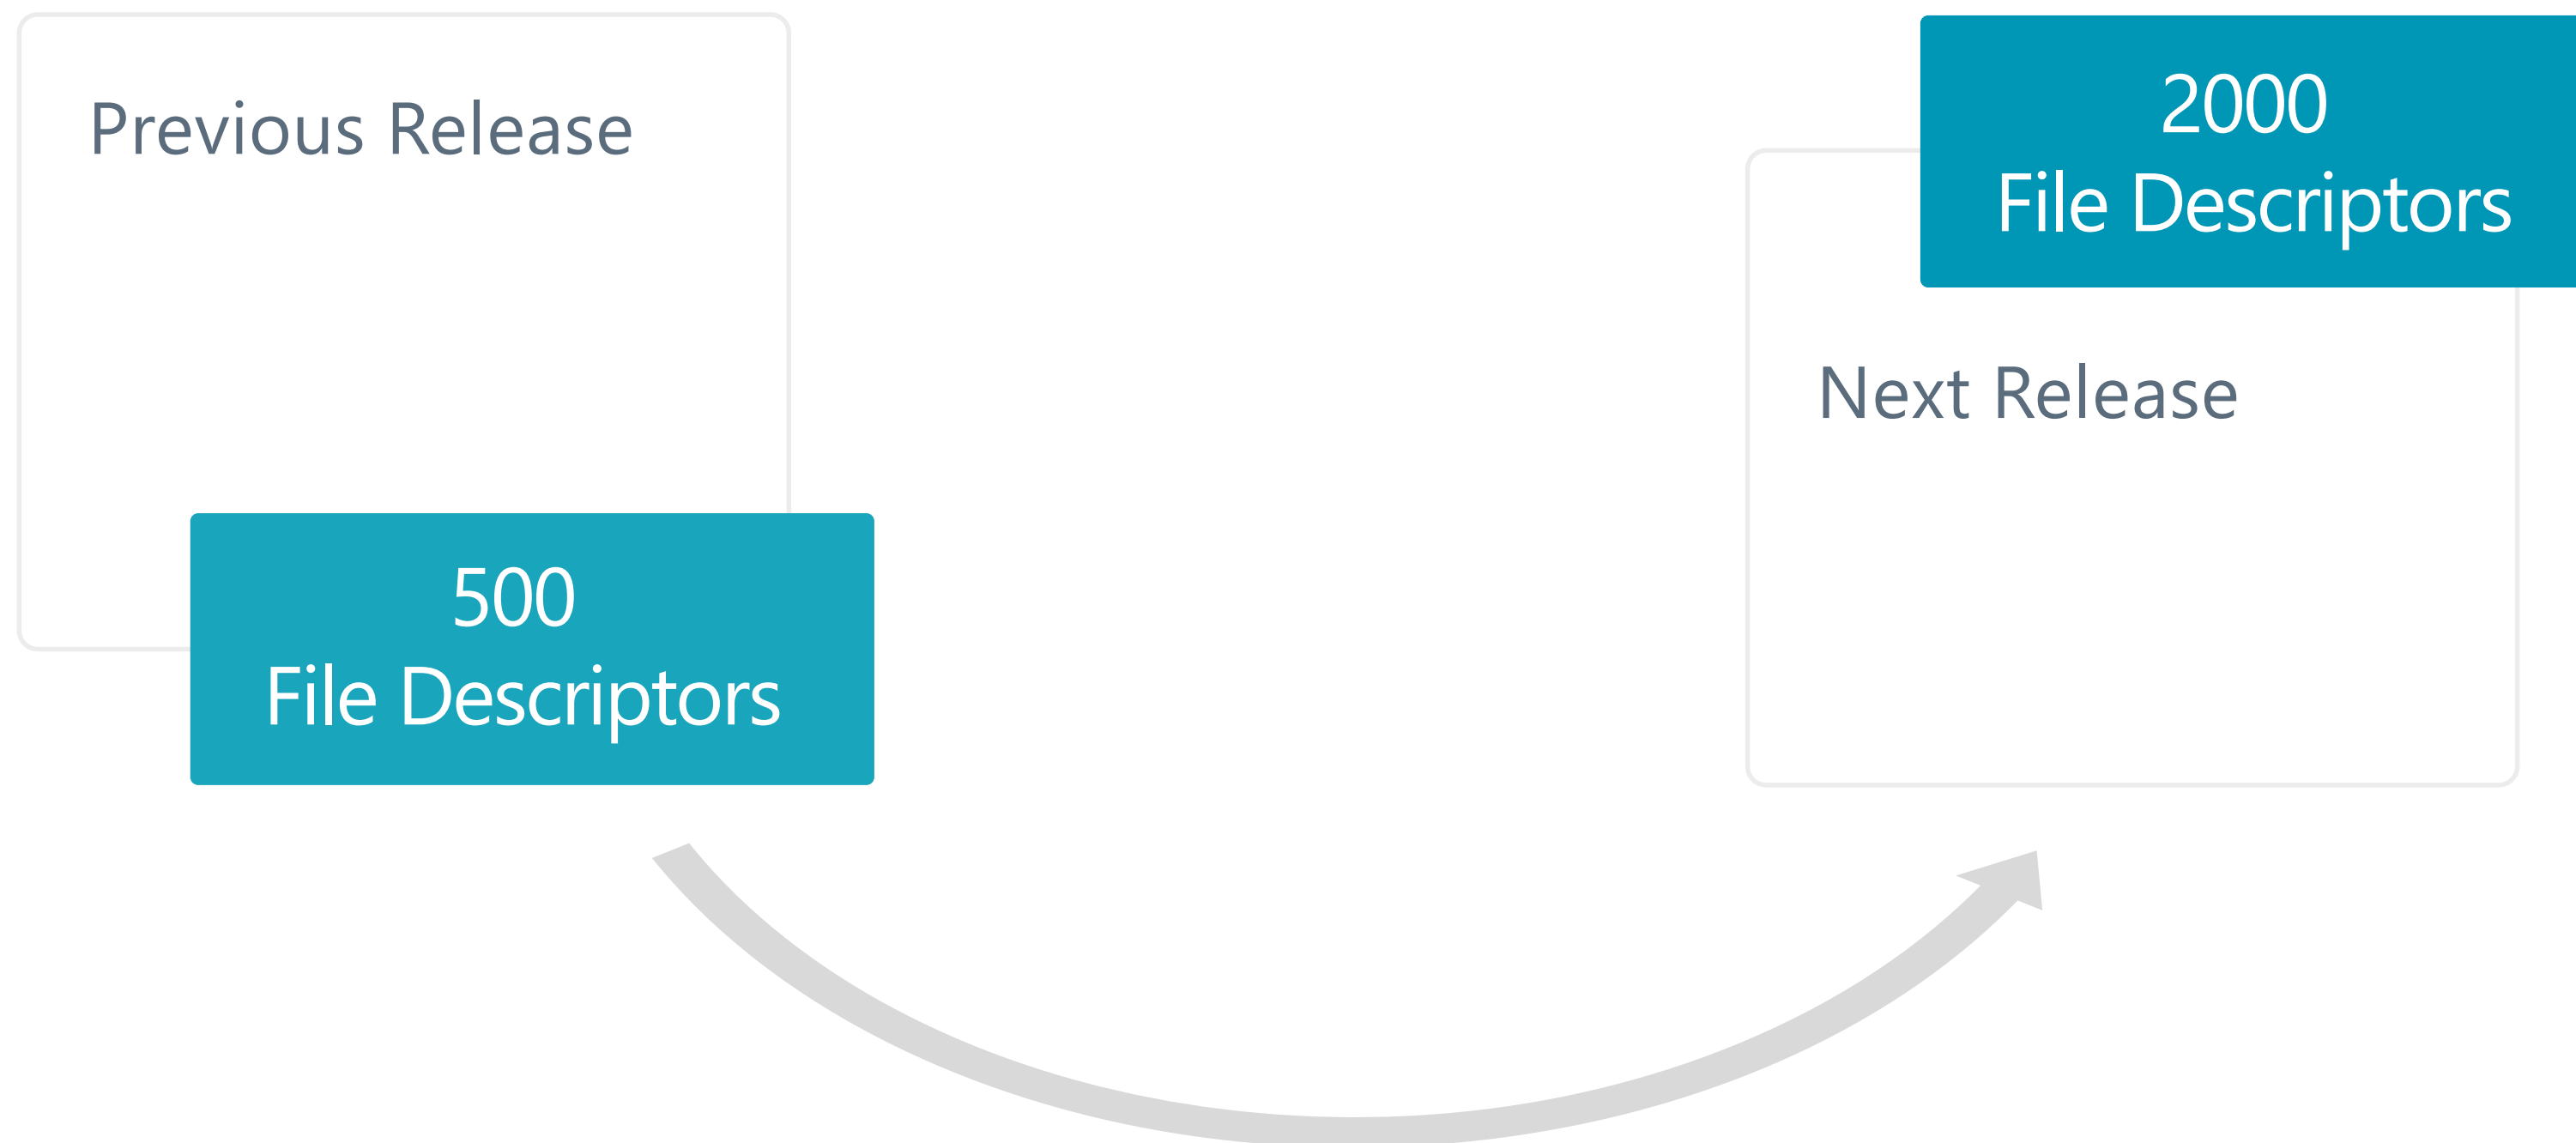

7: Objects waiting for finalization

8: Boxed numbers

9: Overhead caused by Object Headers

6. File Descriptors

Number of open File Descriptors

File Descriptors:

- Open File Handles
- Open Network connections
- Pipes

Agenda

1: What?

What are the micrometrics that you want to monitor?

2: How?

How to source these metrics?

3: Where?

Where to use these metrics?

Garbage Collection Logs

How to enable Garbage Collection Logs?

Till Java 8:

-XX:+PrintGCDetails -XX:+PrintGCDateStamps -Xloggc:<file-path>

From Java 9:

-Xlog:gc*:file= <file-path>

Tools

GCeasy.io

IBM Pattern Modeling and Analysis Tool for Java Garbage Collector

HP Jmeter

Google Garbage Cat

1. Object Creation rate

2. GC Latency

3. GC Throughput

Agenda

1: What?

What are the micrometrics that you want to monitor?

2: How?

How to source these metrics?

3: Where?

Where to use these metrics?

Where?

Where to use these metrics?

CI/CD

Fail the build if any of the micrometrics thresholds are breached

CI/CD

Performance Tests

Performance Tests

Examine micrometrics in each release

Production

You can use this micrometrics for production monitoring

Production
